

Innovation (n.)

Owing to the continuous progression of scientific innovation,
people nowadays lead a comfortable and convenient life with
almost every need met.

Inevitably (adv.)

The findings of scientific research iron out many complex challenges that every society **inevitably** faces, as they allow us to carry out investigations of formerly unexplained phenomena and hence alleviate the effects of natural disasters torturing people in both local and global contexts.

Phenomena (n.)

The findings of scientific research iron out many complex challenges that every society inevitably faces, as they allow us to carry out investigations of formerly unexplained **phenomena** and hence alleviate the effects of natural disasters torturing people in both local and global contexts.

Profound (adj.)

Having discussed that science is intricately interwoven into our current technology-driven lives and that science exerts a **profound** influence on the quality of healthcare, I strongly believe that the government should continue to prioritise scientific research.

Torture (v.)

The findings of scientific research iron out many complex challenges that every society inevitably faces, as they allow us to carry out investigations of formerly unexplained phenomena and hence alleviate the effects of natural disasters torturing people in both local and global contexts.

Tragedy (n.)

Therefore, science helps us to avert most real life **tragedies** as scientists combine their wisdom to understand the world more deeply to invent solutions to solve acute problems.

Vulnerable (adj.)

For example, not only do implications of scientific advances help to save millions of **vulnerable** lives in countries afflicted with devastating diseases such as AIDS and cancer, but they also are leveraged to expand medical services that lead to an increased life expectancy in the long run.

Wisdom (n.)

Therefore, science helps us to avert most real life tragedies as scientists combine their **wisdom** to understand the world more deeply to invent solutions to solve acute problems.

Alleviate (v.)

The findings of scientific research iron out many complex challenges that every society inevitably faces, as they allow us to carry out investigations of formerly unexplained phenomena and hence **alleviate** the effects of natural disasters torturing people in both local and global contexts.

Ameliorate (v.)

Given that applications of science simplify life for most people and that scientific breakthrough contribute significantly to **ameliorate** people's living conditions, I will examine the reasons why the government should be obliged to allocate a higher proportion of funding to scientific research than non-scientific research.
